

About Me

Final-year Electronics and Communication Engineering student with a strong focus on software application development and system workflows. Experienced in building functional web tools, AI-assisted applications, and proof-of-concept systems. Comfortable learning complex enterprise platforms, understanding structured data flows, and working in process-driven consulting environments.

Education

B.Tech in Electronics and Communication Engineering
Vidya Jyothi Institute of Technology, Hyderabad
CGPA: 8.93

Intermediate (MPC)
Sri Bhavishya Junior College, Vijayawada
Percentage: 79.6%

Secondary School Certificate (SSC)
Dr. K.K.R's Gowtham School, Visakhapatnam
CGPA: 10

Skills

- Software & web application development
- JavaScript, Python
- System workflows & logical process design
- Proof-of-concept development
- Data validation & automation logic
- AI-assisted tooling and rapid learning

languages

- Telugu
- English
- Hindi

ASMITH PAMPANA

Software-Focused ECE Student
| Web & Systems Development

Projects

Lumina — AI Decision-Making Tool
AI-powered web application

- Designed an AI-driven system that guides users through structured, challenging questions to surface blind spots and actionable decisions
- Focused on logic flow, clarity of output, and reliable system behavior rather than generic responses

Aetherway — Intelligent Travel Planning Application
AI-assisted system planning tool

- Built a multi-modal travel planning application comparing flights, trains, buses, and self-drive options
- Implemented structured recommendation logic, real-time validation, and clear result presentation for decision support

QR A3 Batch Generator
Utility web application

- Developed a functional tool for batch QR code generation and print-ready A3 layout creation
- Emphasized workflow automation, usability, and real-world operational efficiency

Experience

Engineering Intern
Hindustan Aeronautics Limited (HAL) **October 2025**

- Developed a Python-based simulation to model and validate data-link establishment logic between two wireless devices
- Focused on system behavior analysis, state transitions, and reliability testing in a controlled simulation environment

IoT & Robotics Intern
EduTech Innovations, Hyderabad **March 2025**

- Worked on rapid prototyping of system-level solutions for educational and proof-of-concept use cases
- Gained experience in understanding requirements, iterative development, and structured technical workflows
